Learning Project-II Review Report-2

PROJECT TITLE		Group Number	
Team Leader Name and Roll No	Team Members Name and Roll No	Learning Project-II Status Till Date	Tentative Date of Submission of Project
1.Abhinash Kumar Singh(24cseaiml088)	1.Ankit Naik(24cseaiml166) 2.Anshuman Nayak(24cseaiml105)	31 st Jan 2026 to 23 rd Mar 2026	2 nd -8 th April 2026

PROJECT SUMMARY: -

RAYNOVA AI is an educational platform that simplifies medical radiograph interpretation for bone, dental, abdominal, and CT scans. Using a multi-stage AI pipeline and curated datasets like **CheXpert**, the system identifies X-ray types and detects common abnormalities to assist students and learners.

The **Chest X-ray classification model** allows users to upload chest images to receive an evaluation of their chest health. The model identifies the scan, classifies conditions such as **Pneumonia** or **Normal** states, and utilizes **Grad-CAM** technology to highlight the specific regions influencing the AI's result.

To ensure ethical use, the platform provides structured reports with educational insights instead of formal medical diagnoses. This secure web application also prioritizes privacy by automatically deleting images, making complex radiology concepts more accessible and approachable.

PROJECT OVERVIEW: -

CATEGORY*	PRESENT STATUS OF PROJECT	PERCENTAGE OF WORK COMPLETED	PENDING WORK
ML and Web Dev	Chest Model completed	80%	UI and Report generation

*(Research Based/App Development (system/mobile/cloud/iot, etc.)/Web Application/Data Science Application)
